

Discover Symbios™ “BLUE” Handset Computer

Symbios “BLUE” delivers the same intelligent design and feature-rich ecosystem as our flagship Silver handset but without wireless CCR integration, allowing divers to access this cutting-edge platform at an even more compelling price point. The Symbios Blue Handset is well-suited for recreational, technical, and sidemount diving across various environments, with full oxygen, nitrox, and trimix capabilities. It even includes a Fixed Setpoint (FSP) CCR mode for non-wireless CCR integration.

Symbios™ “BLUE” still offers full compatibility with the wider Symbios™ ecosystem, including the Symbios Tank Pod, DPV interface, GPS Pod, and other future innovations. With its transfective color screen, rechargeable battery, intuitive interface, and rugged build, it delivers an exceptional experience for divers of all levels.

Experience the Symbios difference and take advantage of this unique offering, now available with an elegant and timeless Halcyon blue screen.
